DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/29/07 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. The rejection of claims 1, 5, 7, 14, 17, 21 and 25 under 35 U.S.C. 102(e) as being anticipated by Nolan (US 2004/0258963) is withdrawn in view of Applicant's amendments.

4. Claims 2-5, 7, and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Nolan (US 7211340).

Nolan discloses a magnetic recording medium having a substrate formed from NiP-coated AlMg, a first crystalline layer, a second hcp crystalline layer, a third crystalline layer and

Art Unit: 1773

a magnetic recording layer formed from a CoCr alloy. Each of the crystalline layers is non-magnetic. See col. 10, line 32 to col. 11, line 4. Nolan teaches the use of hcp materials such as Co for the first crystalline layer. It is the examiner's intention that the group of suitable materials disclosed for use as the first crystalline layer is small enough that one of ordinary skill in the art at the time of invention would have immediately envisaged an embodiment of the invention using hcp Co. See col. 13, lines 33-57.

5. Claim 22 is rejected under 35 U.S.C. 102(e) as being anticipated by Girt et al. (US 2004/0247943).

Girt discloses a magnetic recording medium having a substrate formed from NiP-coated AlMg, multiple underlayers including a first crystalline layer, a second hcp crystalline layer, a third crystalline layer and a magnetic recording layer. Each of the crystalline layers is non-magnetic. The reference teaches that the hcp layer contains minor amounts of a bcc-structured elements selected from the group including W, Mo, Ta, Nb, Cr, and V (see paragraph [0029]).

Claim Rejections - 35 USC § 103

6. The rejection of claims 2-4, 15, and 22 under 35 U.S.C. 103(a) as being unpatentable over Nolan (US 2004/0258963) is withdrawn.

Allowable Subject Matter

7. Claims 1, 14-15, 17, 21, 25, and 27-40 are allowable over the closest prior art to Nolan and Okuyama et al. (US 6682834). Nolan fails to teach or suggest the claimed multi-layered

Art Unit: 1773

intermediary structure in combination with a magnetic layer having a Cr-rich and a Cr-dilute layer containing specific amounts of Cr.

Okuyama et al. teaches a magnetic recording medium having multiple underlayers and a magnetic recording layer having a "Cr-rich layer" and a "Cr-dilute layer." The reference teaches a single hcp interlayer that is disposed between the multiple underlayers and the magnetic recording layer. It would not have been obvious to modify Okuyama et al to include a "third intermediary layer. It would not have been obvious to arrive at the claimed invention in view of either Nolan or Okuyama et al.
